

## About NeuVector

NeuVector, the leader in Full Lifecycle Container Security, offers the only cloud-native Kubernetes security platform delivering uncompromising end-to-end protection from DevOps vulnerability protection to automated run-time security, and featuring a true Layer 7 container firewall.

NeuVector delivers east-west container traffic visibility, container protection, and host security in a complete end-to-end container security platform. NeuVector customers include global leaders in financial services, healthcare and publishing.

Founded by industry veterans from Fortinet, VMware, and Trend Micro, NeuVector has developed patent-pending behavioral learning for container security.

# Containers Bring New Security Demands, and Threats

Enterprises are racing to architect enterprise-wide container strategies for multi-cloud and on-premise platforms. These Kubernetes, Docker and OpenShift environments operate at highly automated scale with hundreds, and even thousands, of containers continuously interacting. Critical vulnerabilities can open the door to hackers, requiring scanning at all stages of the pipeline. The combination of east-west container traffic explosion, low network visibility and legacy security tools leave security teams blind and at-risk. NeuVector delivers a complete lifecycle container security platform with the industry's only multi-vector container firewall, delivering vulnerability scanning combined with true Level-7 container network protection.

Leading enterprises around the globe choose NeuVector because they know run-time container security without deep network protection leaves you vulnerable.

## The NeuVector Solution

NeuVector delivers a complete end-to-end container security solution featuring unique network packet visibility and protection, a container process & file system monitor, and vulnerability management. NeuVector automatically scales, requires zero-configuration with no error-prone manual policy updates, even as the number or types of containers expand or contract to meet service demands. NeuVector instantly detects and prevents container attacks and violations, suspicious processes, and application vulnerabilities during the entire CI/CD pipeline from build to ship to run-time.

**The solution is a cloud-native container itself and is simple to deploy on greenfield or brownfield environments. No agents, no coding, and no embedding required!**
